Subject:

Please Rush Sequence Search-09/782,874--

Could you please do a sequence search and an oligo search on SEQ ID No 1 and 2?

On the results for the oligo searches, could you please print out more of the results? Like up to the first 50?

This is for the inhouse and commerce data bases. (no intererence search though)

I need this case for this biweek.

Thanks in advance, Georgia L. Helmer Ph.D. **Patent Examiner** Crystal Mall 1, 9D14 AÚ 1638 703-308-7023 Georgia.Helmer@USPTO.gov

Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This sequence represents the tomato RNA-directed RNA polymerase (RdRP)

protein of the invention. The invention comprises the nucleic acid and

protein sequences of RARP. The protein of the invention can catalyse in

vitro transcription of short single stranded RNAs into DNA molecules,

this transcription can be either primed by RNA or DNA oligonucleotides

cor be unprimed. The protein may have cytostatic or virucide activities.

The sequences of the invention may be used in gene therapy or as an RNA

directed RNA synthesis inhibitor. The RdRP cDNA sequence and a template

cor molected and equile derived from a nucleic acid molecule which causes

disease are useful for treating a disease caused by the undesired

expression or overexpression of a nucleic acid molecule which causes

a disease are useful for treating the molecules. This system can be used in the

preparation of any desired gene by transferring the RdRP system to

corganisms that either lack a comparable mechanism or do not sufficiently

expression of any desired gene by transferring the RdRP system to

corganisms that either lack a comparable mechanism or do not sufficiently

express their own RdRP. An antibody or an antagonist or inhibitor to the

protein are useful for inhibiting RNA directed RNA synthesis and for

corganisms that either lacks a comparable mechanism or do not sufficiently

expression, as primers for amplification of the control of gene

as tools for the detection of expression in transgenic organisms.

The sequence is useful for probes and/or for the control of gene

as tools for the detection of expression in humans and animals. The RdRP

systems as therapeutic agent for the control of cancer and virus

systems as a therapeutic agent for the control of cancer and virus

infection in humans and animals and the antibody is useful for

inmunoprecipitation or immunologialisation of the protein, identification

cof polypeptides interacting with it and screening expression libraries.
New nucleic acid molecule encoding a polypeptide having the enzymatic activity of RNA-directed RNA polymerase, for modulating gene expression and treating cancer and virus infection in human and animals
                                                                                                                                      Claim 1; Page 19-22; 34pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is a tomato C-protein having RNA-directed RNA spotymerase (RdRP) activity. This protein is capable of RNA-directed RNA synthesis, thus using RNA as a template for synthesising complementary RNA molecules. RdRP nucleic acid is useful for modulating gene expression in plants, humans and animals. This may lead to various physiological, developmental and/or morphological changes. Transgenic plants containing RdRP nucleic acid is especially useful in plant cell or tissue cultures and in plant breeding. RdRP is useful in gene therapy, particularly for overexpression of a gene.
                                                                                                                                                                                                                                                                                                                       New nucleic acid molecules encoding polypeptides with RNA-directed RNA polymerase enzymatic activity, useful in modulating gene expression in plants, humans and animals, as well as in plant cell/tissue cultures or

                                                                                              nucleic acid fragments encoding RNA-directed RNA polymerase useful controlling gene expression and providing mechanisms to engineer
                                                                                                                                                                                        The present sequence is part of a plant RNA-directed RNA polymerase protein. Polymerases encoding RNA-directed RNA polymerases were isolated from plant cDNA libraries. They are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired

Polymucleotides encoding RNA-directed RNA polymerases were isolated from plant cDNA libraries. They are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A new plant SGS2 gene involved in encoding an RNA-dependent RNA polymerase and in transgene silencing, increases transgene stability and expression in transgenic plants when it is inactivated -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 VEPHAFVHFAVFESÅGRAMDAAGQCNLILDGQPLKVSLGPKNPYSLNQRRRTTVPYKLAG 134
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a plant SGS2 polypeptide. SGS2 is an RNA-dependent RNA polymerase and is involved in transgene silencing. Inactivation of SGS2 is used to increase transgene stability and expression in plants, particularly crop plants, especially maize, conbarley, sorghum, soya, sugar cane, beet, tobacco or cotton plants. Overexpression of SGS2 can be used to increase resistance to viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                63

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid fragments encoding RNA-directed RNA polymerase useful for controlling gene expression and providing mechanisms to engineer plant virus resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is part of a plant RNA-directed RNA polymerase protein. Polynucleotides encoding RNA-directed RNA polymerases were isolated from plant cDNA libraries. They are useful as probes for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired phenotypes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     215

                                                                                                                                                                                                           The present sequence is part of a plant RNA-directed RNA polymerase protein. Polymerases encoding RNA-directed RNA polymerases were isolated from plant cDNA libraries. They are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is tomato RNA-directed RNA polymerase 800 (RdRP800) protein which corresponds to position 700-917 of C-protein. C-protein is capable of RNA-directed RNA synthesis, thus using RNA as a template for synthesising complementary RNA molecules. RdRP nucleic acid is useful for modulating gene expression in plants, humans and animals. This may lead to various physiological, developmental and/or morphological changes. Transgenic plants containing RdRP nucleic acid is especially useful in plant cell or tissue cultures and in plant breeding. RdRP is useful in gene therapy, particularly for treating a disease that is caused by the undestrable expression or overexpression of a gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                Tomato; gene therapy; RNA-directed RNA polymerase; RdRP; gene expression;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is part of a plant RNA-directed RNA polymerase protein. Polynucleotides encoding RNA-directed RNA polymerases were isolated from plant cDNA libraries. They are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    IRYGGYKGVVGVDPDSSMKLSLRKSMSKYESDNIKLDVLGWSKYQPCYLNRQLITLLSTL 613

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid fragments encoding RNA-directed RNA polymerase useful for controlling gene expression and providing mechanisms to engineer plant virus resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is part of a plant RNA-directed RNA polymerase protein. Polymucleotides encoding RNA-directed RNA polymerases were isolated from plant cDNA libraries. They are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is the Neurospora crassa QDE-1 protein. This protein has gene silencing activity. The qde-1 gene was isolated by mutational analysis of an al-1 transgenic strain. This strain had an albino phenotype resulting from post-transcriptional silencing of the endogenous al-1 gene. Reversion of this phenotype indicated a mutation in a silencing gene. The allencing gene, qde-1, could then be isolated. Modulation of qde-1 expression may be used to inactivate genes and to silence suppression of genes.

                                                                                       Zhong G;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid fragments encoding RNA-directed RNA polymerase useful for controlling gene expression and providing mechanisms to engineer plant virus resistance
                                                                                                                                                               New nucleic acid fragments encoding RNA-directed RNA polymerase useful for controlling gene expression and providing mechanisms to engineer plant virus resistance
                                                                                                                                                                                                                                                                                           The present sequence is part of a plant RNA-directed RNA polymerase protein. Polynucleotides encoding RNA-directed RNA polymerases were isolated from plant cDNA libraries. They are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The present invention relates to von Willebrand factor binding protein o polypeptide (vWb) from Staphylococci. The vWb and immunogens of vwb are useful in vaccines to combat infections caused by Staphylococci. The invention is also useful for detection of staphylococcal infection and purifying von Willebrand factor from a complex solution. The present sequence is Staphylococcus lugdunensis vWbl protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 60 KIITLANNRLYFGSSYLKAWEMKTDIVQL-----RAYVDQMDGITLNFGCQISDDKFAV 113

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is part of a plant RNA-directed RNA polymerase protein. Polynucleotides encoding RNA-directed RNA polymerases were isolated from plant cDNA libraries. They are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                 US-09-782-874-2
